(54) PAPER CUP FOR HEAT-PROCESSED CAKE

(57)Abstract:

PROBLEM TO BE SOLVED: To make a paper cup for heat-processed cake free from fine wrinkles formed at its sticking part by a method wherein a sticking film made of polyethylene terephthalate film is used as a sticking medium that sticks the internal face of a turn-up part at the side plate of the paper cup to the external face of the side plate.

SOLUTION: A bottom plate demarcated with upward-looking creases approximately in a circular shape is formed concentrically to a circular paper, to which a polyethylene terephthalate laminate layer is stuck to its face becoming the internal face of a cup, and a number of radially-shaped inward-looking creases 15 and outward-looking creases 16, each slightly inclined against each of the creases 15, are respectively formed at the outside thereof, and a side plate having alternately long, narrow wedgelike turn-up parts 17 and long, trapezoidal unit side plate parts 18, each demarcated and formed by each of the creases 15 and 16, is bent and raised at the upward-looking creases.
